

ASSIGNMENT

- Perform the following question in Background Script in Snow:

- Create two user defined tables 'MyTable', 'MyTableCopy' with five fields such that on insertion of a record in Mytable , MytableCopy should also have a record.
- Perform Delete operation on above two tables such that on deletion of Mytable record MyTableCopy record also should get deleted.
- Get one record in MyTable and update all string fields with value → “Same value”
- Update records in MyTableCopy but do not update the Updated by Fields.
- Use any 10 methods of GlideSystem such as gs.log.
- Read records in MyTable and print the the fields in the following pattern.
Field1: Value + Field2: Value +..... field5: Value
